

SMS Blaster Detection & Protection

Stop the attacks your firewalls can't see.

Portable SMS blaster attacks from rogue base stations bypass every conventional network defense. Identify them through core network signaling analysis and give your team and law enforcement agencies the means to act before your subscribers get compromised.

Effective detection

Proactive limitation & subscriber notification

Positioning support for LEA

Benefits:

- Detect the previously undetectable
- Proactively protect subscribers
- Support law enforcement
- Reduce false positives
- Leverage existing infrastructure
- Align with industry standards

Validation:

As a GSMA member, we were one of the first vendors to cover SMS Blaster Prevention publically.
